

FAROOK AJOSE

DATA SCIENTIST

Lagos, Nigeria | farookajose@gmail.com | +234 905 776 5034 | [linkedin.com/in/farook-ajose](https://www.linkedin.com/in/farook-ajose) | github.com/fkajose

PROFESSIONAL SUMMARY

Data-driven First-Class Chemical Engineering graduate with hands-on experience building cloud-deployed data pipelines and analytics systems. At EnvironQuest, built a Python-based data infrastructure that cut processing time by up to 99% and led emissions data quantification for 20+ projects. Proficient in Python (Pandas, scikit-learn), SQL, AWS S3, and Power BI, with a Professional Data Scientist certification and applied ML coursework from an in-progress MScFE.

WORK EXPERIENCE

Data Scientist — EnvironQuest Nigeria Limited

Apr 2025 – Apr 2026

- Built a Python-based data pipeline and cloud-hosted regulatory database processing structured and unstructured compliance data across federal, state, and sector levels — cutting analysis turnaround by up to 99%, from ~2 days to minutes.
- Quantified Scope 1 & 2 emissions data for 20+ infrastructure projects, standardizing data-collection templates into a reusable calculation framework.
- Cleaned, structured, and analyzed multi-source field datasets (air quality, noise, wastewater) across concurrent projects, producing audit-traceable outputs.
- Developed a Python-based document indexing and search tool to speed up data retrieval across a growing regulatory corpus.

Process Engineering Intern — Nestlé Nigeria PLC, Agbara Factory

May 2022 – Oct 2022

- Monitored and logged operational parameters (DO, MLSS, SVI, COD, BOD) via SCADA/HMI, translating instrument data into performance benchmarks.
- Built a multi-variable cost model that identified a 19% fuel cost and 16% emissions reduction opportunity.

KEY PROJECTS

Stock Market Movement Prediction — ETF Technical Indicators — WorldQuant University MScFE, Group Project 2026

- Built and evaluated ML models across 200+ technical indicators; feature-selected subset outperformed the full feature set (78.5% vs 71.1% accuracy on IVV).

Parallel Image Processing & Cloud Data Pipeline — Quasar Yearbook

2025

- Built a concurrent Python pipeline (ThreadPoolExecutor) to batch-process 400+ images with idempotent AWS S3 uploads and a relational student/department data model.

Tasty Bytes Recipe Popularity Prediction — DataCamp Certification Project

2023

- Built a classification pipeline (Logistic Regression and Random Forest models) achieving 83% precision, surpassing an 80% business target.

ASUU Strike Effect Analysis — <https://github.com/fkajose/asuu-strike-project/>

2023

- Led a team investigating the academic and social impact of the 8-month 2022 ASUU strike on University of Lagos students — designed survey instrument, coordinated data collection, and built a Power BI dashboard to monitor survey performance.
- Performed EDA, statistical testing (SciPy), and NLP-based text analysis (NLTK) on student responses; produced findings for public dissemination.

SolarViability — TID 3.0 Innovation Challenge <https://github.com/fkajose/TID-TIC045/>

2023

- Co-developed a data-driven web application assessing solar energy viability across Nigerian locations, integrating Solar Irradiance and geospatial APIs to convert addresses to coordinates and compute site-level energy potential.
- Built predictive viability models comparing renewable deployment scenarios for underserved regions; placed 3rd nationally, winning \$500.

EDUCATION

M.Sc. Financial Engineering, WorldQuant University (in progress) — coursework in probability, statistics, and quantitative modeling

B.Sc. Chemical Engineering (First Class Honours), University of Lagos — 2024

SKILLS & TOOLS

Programming & Data: Python (Pandas, NumPy, scikit-learn, Matplotlib), SQL, Google Apps Script

Cloud & Visualization: AWS S3, Power BI, Excel, Google Workspace

Certifications: Professional Data Scientist (DataCamp) · Applied Data Science Lab (WorldQuant University)
